Cork Polishing Wheels KF711

atto Abrasives offer a New Generation of Cork Polishing Wheels - the KF711 range. Designed for the finishing of a wide range of materials, the wheels are ideally suited for Saw Blade polishing and the finishing of Cutlery.

The special composition of the KF711 allows the wheel to adapt to varying conditions without generating excess heat or loading.

Availability

Grit Types: Aluminium Oxide, Silicon Carbide, White Aluminium Oxide

Hardness: K to T

Grit Sizes: from 36 to 1,000 (FEPA)

Diameter: from 50 to 610 mm

Thickness: from 1 to 150 mm

Shapes: Types 1, 2, 5 and 7
slabs and sticks

Bore: as requested

Specifications

For materials such as:

- Stainless Steel
- Hardened Steel
- HSS
- Non-ferrous Metals (e.g. Titanium)
- Steel

Applications

The atto KF711 Cork wheel range is suitable for the wet and dry grinding and polishing of saw blanks, cutlery, turbine blades, as well as medical implants. The wheels are also suitable for centreless grinding.

The atto KF711 products offer a flexible bond while maintaining abrasive properties, thus offering a polished finish with excellent stock removal.

Suitable for the use on Manual, Automatic and Robotic machines.
